

TaskBrigde

Connecting Agricultural Specialists with Places Where They are Needed

Interactive platform that reveals where specialists are required, what roles are open, how many positions exist, and how to contact organisations — bridging education, employers, and regional demand across Kazakhstan.

The Problem: Rural Shortages and Fragmented Information

Rural agricultural organisations often lack qualified specialists. Students and young professionals struggle to find real-world opportunities because information is scattered or incomplete.

What organisations don't know

Which candidates are available locally, how to reach them, where to advertise positions.

What students don't know

Where roles exist, required skills, contact process, and internship pathways.

Our Solution: A Single Source of Demand

TaskBridge it is a searchable platform with tools to create, verify and apply for agricultural roles — helping organisations, students, NGOs and policymakers act faster and smarter.

Interactive Map

Visualise vacancies by village, district or region.

Opportunity Catalog

Structured listings with roles, skills and positions available.

AI Clarification

AI-guided creation to ensure requests are complete and publishable.

How the Map Works

Settlement Filters

City, Village, District, Region toggles

Pin Details

Specialist, vacancies, organisation, contact

Specialist Categories & Filtering

TaskBridge supports a comprehensive taxonomy so organisations and applicants match precisely.

Users can filter openings by specialty, skills, availability and location radius.

Agronomists

Crop planning, monitoring, fertilisation regimes

Agricultural engineers

Mechanisation, irrigation systems, equipment maintenance

Veterinarians

Livestock health, biosecurity, vaccinations

Lab & biotech specialists

Seed testing, tissue culture, diagnostics

Creating a Request — Simple, Structured

Organisations submit standardised requests capturing all details needed to evaluate and publish an opportunity.

01

1. Define role

Location, specialty, number of positions, work period.

02

2. Specify requirements

Skills, experience, certifications, accommodation, salary.

03

3. Confirm contact

Organisation contact, application instructions, deadlines.

From Request to Hired Specialist

1. Organisation creates a request
2. AI helps complete missing details
3. Request receives readiness score
4. Organisation confirms and publishes
5. Opportunity appears on the map
6. Student or specialist discovers and applies
7. Organisation reviews applications and contacts candidate

AI Assistant: Ensure Complete, High-Quality Requests

The AI prompts for missing details, suggests standardised phrasing, and reduces back-and-forth — every AI-suggested request is reviewed by a human before publication.

→ Example flow

Org: "We need an agronomist." → AI: "How many? What crops? Is accommodation provided?"

→ Human review

Local coordinator confirms accuracy and context prior to posting.

Readiness Score: 0–100

Each request receives a transparent readiness score based on information completeness — enabling applicants and partners to prioritise high-quality opportunities.

1

Location
15 pts

2

Number of specialists
15 pts

3

Specialty & skills
30 pts (15 + 15)

4

Working conditions & pay
20 pts (10 + 10)

5

Contact & application
15 pts (10 + 5)

Conclusion

Included features

Interactive map, demand markers, opportunity catalogue, readiness score, AI assistant, request creation and application flow.

Pilot outcomes

Next steps: pilot with regional agricultural universities, local government offices, and 10 partner farms in Petropavl area

The importance for the Future

- 1 Increases the visibility of job vacancies and internships in rural areas
- 2 Strengthens the connection between education and industry
- 3 Supports regional employment and the sustainable development of the agricultural sector
